

Taking A Deeper Look at OHI Discovery

Navy Results - Purchased Care Insurance Discovery/Verification File

Of the 371 patients identified as “new OHI”, we identified 282 –or

76% were duplicates

and not true “new OHI.”

Of the remaining 89 policies, many had the wrong policy numbers or inaccurate information.

All policies had to be re-verified, leading to increased costs and non-billable claims.

The **additional costs include payment to the vendor for false positive** “hits” that provided no value-add.

The file contained medical OHI only and **did not include Rx coverage.**

Rx is a majority of billable coverage within the DoD; therefore a huge lost opportunity for the Government.
